WORK EXPERIENCE

Senior Mobile Engineer

Luxury Presence — Remote | *Nov 2022 – Present*

- Defined the React Native (Expo) app architecture, including state management, screen patterns, and component structure, and mentored 2 engineers transitioning from web to mobile.
- Contributed to a 20% performance improvement by optimizing startup speed and resolving memory leaks in Expo.
- Migrated state management from Zustand to XState state machines for more predictable, maintainable app state.
- Managed over-the-air updates and release workflows with EAS (Expo Application Services).
- Owned mobile and web test automation using Detox, Maestro, Appium, Jest, React Native Testing Library, and Playwright. Reduced a mobile end-to-end pipeline from 20 minutes to 5 minutes in a separate project.
- Profiled Android rendering and runtime behavior to identify and resolve performance bottlenecks.
- Delivered Notes on Boards and Boards sharing from concept to release with product and design. Owned the storage model and rich-text client built on react-native-pell-rich-editor, supporting images, Markdown, and links.
- Optimized federated GraphQL queries for 15% better performance.
- Built an SSO-protected internal Model Context Protocol (MCP) gateway with a team of 5 using a fork of IBM ContextForge, replacing the third-party Mint MCP server.
- Built agent-driven incident workflows triggered by Datadog alerts as part of on-call response, reducing alert volume from roughly 10 per day to 2–5 and triage time from one week to 2–3 days.

Industry: Real Estate

Stack: React Native, Expo, EAS, Swift, TypeScript, XState, Zustand, Apollo, GraphQL, AWS, MCP, Datadog

Software Engineer

Boom Entertainment — Remote | *Apr 2022 – Nov 2022*

- Implemented new game formats and social features across the presentation, server, event, and storage layers of React Native applications for the Free-to-Play Sports and Daily Fantasy Sports divisions.
- Built an internal admin section to manage how game data was structured for the client and persisted in MongoDB.
- Extended the React client's factory-pattern architecture to support a new game format while preserving the existing Redux structure.

Industry: Real Money Gaming, Sports Betting, Casino, Free-to-Play

Stack: React, Redux, TypeScript, Node.js, JavaScript, MongoDB, React Native, GCP

React Native Developer (Side Project)

Puramente — Remote | *Oct 2020 – Aug 2022*

- Delivered features for a Spanish-language meditation app rated 4.9/5 using React Native and Firebase Realtime Database, including a HealthKit integration to help users explore meditation and sleep patterns.
- Enabled offline meditation playback and combined two audio libraries to resolve conflicts between background music and guided narration.
- Migrated React Navigation from v4 to v5, improving performance by roughly 50% and unlocking newer navigation capabilities.
- Built React admin tools for user management, premium access, and RevenueCat integration, and onboarded team members to support daily operations.

Stack: React Native, TypeScript, GCP, Firebase, BigQuery, Rematch, React, React-Admin, Redux

Software Engineer
SteadyMD — Remote | *Nov 2018 – Apr 2022*

- Led 2 outsourced engineers building a white-label React Native app as the team grew from 1 to 3 engineers. Coordinated delivery, quality assurance, and code review across the mobile client and its Meteor.js integration.
- Built the patient–clinician messaging product on a fork of Rocket.Chat React Native — 1M+ cumulative messages across 100+ clinicians and around 200 daily active users — using WebSockets, React Native Navigation, Redux, Redux Saga, push notifications, and Realm for offline persistence.
- Built API integrations through the Rocket.Chat SDK middleware in Node.js, and wired up event-driven infrastructure with AWS SNS and SQS.
- Moved report generation to background jobs with BullMQ to prevent admin portal outages.
- Incrementally migrated patient subscription handling from legacy SailsJS to Django and Python, and built an integration with Amazon as a partner.
- Expanded sparse test coverage with Mocha and Chai unit and integration tests, and mentored a QA engineer moving into development.
- Recovered and rebuilt a failed Jenkins CI/CD environment, then added a second instance to automate releases for the SailsJS admin client and the Meteor.js chat server and client; refactored the Next.js client for better performance.

Stack: Node.js, Express, WebSockets, AWS, Docker, Meteor, SailsJS, BullMQ, MongoDB, MySQL, Semantic UI, Next.js, Redux Toolkit (RTK), Django, Vue.js

React Native Developer
Nativapps — Remote | *May 2018 – Sep 2018*

- Built JavaScript animations for a shipped NFL app in a team of 3, using React Native, React, and Webpack.
- Defined the foundation for a client's React Native app from an existing design — tool selection, Redux structure, and initial architecture.
- Adapted React Native components for server-side-rendered web pages, addressing limitations in react-native-web.

React Native Developer
Qrosity — Remote | *Dec 2017 – May 2018*

- Sole mobile developer on a social media app: rebuilt feed and user-data loading with React, Redux-Saga, and React Navigation, cutting load time from 1s to 200ms, and resolved UI rendering issues.
- Owned releases to both the App Store and Play Store, and integrated the client with a new backend service built alongside a backend engineer, including FCM push messaging.

React Native Developer
Inkitt — Remote | *Oct 2017 – Dec 2017*

- Built native Android modules to deliver customized local push notifications that React Native could not support at the time, alongside push notifications for Android and iOS.

React Developer
Petcheck — Remote | *Apr 2017 – Jul 2017*

- Built the calendar integration for a CRM web client in React, with custom modal components using Redux and ES6.

React Native Developer
Tumotorizado — Remote | *Feb 2017 – Mar 2017*

- Prototyped the migration of a legacy PhoneGap app to React Native, building a background-geolocation prototype for Android and iOS with Android SDK integration.

Front-End Developer
SoSystem — Remote | *Apr 2016 – Jul 2016*

- Built WordPress websites and a hybrid Android app with Ionic, and configured and administered Odoo ERP on Linux at an early-stage startup.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, ES6, HTML5, CSS, SQL

Frontend: React, React Native, Redux, Redux Toolkit (RTK), Next.js, Vue.js, Webpack, Tailwind CSS, Semantic UI, Responsive Design

Backend & APIs: Node.js, Express, NestJS, SailsJS, Meteor, Django, REST APIs, GraphQL, Apollo

Cloud & DevOps: AWS (Lambda, Step Functions, DynamoDB, SNS, SQS), GCP, Firebase, Docker, Jenkins (CI/CD), Datadog, Monitoring & Alerting

Data & Messaging: Postgres, MongoDB, MySQL, Realm, BigQuery, Spark, Kafka, Debezium, BullMQ

Testing: Jest, React Native Testing Library, Detox, Maestro, Appium, Playwright, Mocha, Chai

Tools & Methods: Git, Scrum/Agile, Code Review, Cross-functional Collaboration, Mentoring, ETL Pipelines, AI Workflows, AI Agents, MCP, SSO

EDUCATION

Specialization in Software Development
Universidad de Carabobo — Venezuela | *Jun 2017 – Feb 2022*

Electrical Engineering
Universidad de Carabobo — Venezuela | *2007 – 2014*

Advanced Programming Course — Java, Android, Compiere
Fundacid | *Aug 2016 – Oct 2016*

CERTIFICATIONS & LANGUAGES

AWS Certified Cloud Practitioner; IELTS (Cambridge Assessment English) — CEFR B2; English Advanced Communication Course (2015)

Languages: Spanish (Native), English (C1 communication, self-assessed)

Volunteering: English Teacher, AIESEC — Barranquilla, Colombia (May 2017 – Jun 2017). Taught English to 25 secondary-school students over 7 weeks.
